## Übungsserie 1

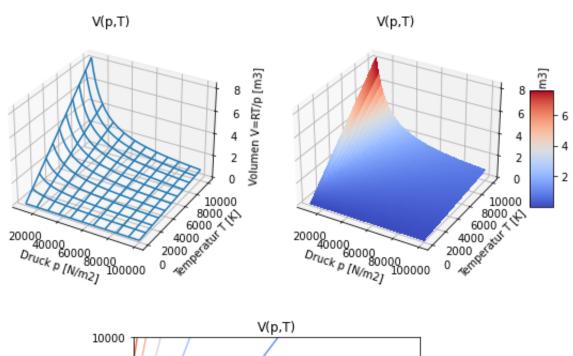

Lösung

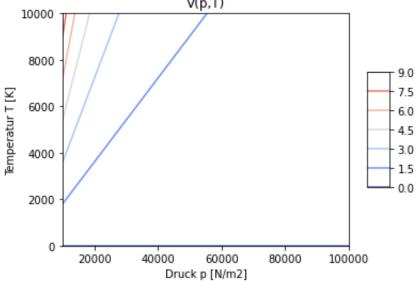

Aufgabe 1:

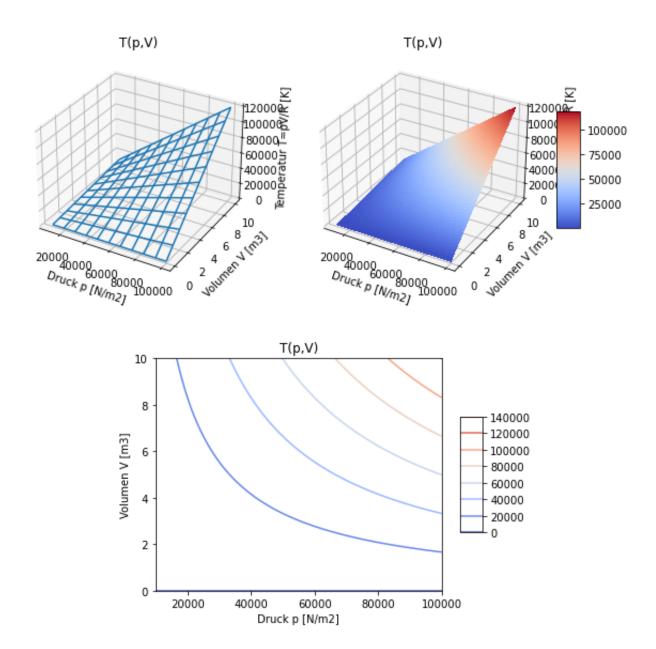

Aufgabe 2:

a1) Der Vergleich von  $\frac{\partial^2 w}{\partial t^2}$  mit  $c^2 \frac{\partial^2 w}{\partial x^2}$  bestätigt die Identität und damit, das w eine Lösung der Wellengleichung ist:

$$c^2 \frac{\partial^2 w}{\partial x^2} = -c^2 \sin(x + ct) = \frac{\partial^2 w}{\partial t^2}$$
 qed.

a2) Analog:

$$c^2 \frac{\partial^2 w}{\partial x^2} = c^2 \left( -\sin(x+ct) \cdot 1 - \cos(2x+2ct) \cdot 4 \right) = -\sin(x+ct) \cdot c^2 - \cos(2x+2ct) \cdot 4c^2 = \frac{\partial^2 w}{\partial t^2} \quad qed.$$

b)
